## **Game Tree Example from Judea Pearl**

Notes prepared by S. Baskaran

## **Judea Pearl, Figure 8.2 Game Tree**

## SSS\* Search Tree

The numbers below the horizon node labels are sequence numbers that show the order in which the horizon nodes were SOLVED.

## SSS\* Solution The game tree has 5 levels (a,b,c,d,e,f), the nodes in each level are

```
numbered from left-to-right: the root is a1 followed by b1, b2; then
c1,...,c4; d1,...,d8; and e1,...,e16.
To reduce clutter, the forward steps that take us from (sub-tree) root
to horizon nodes are not shown here, those steps can be easily em-
ulated by hand.
The backward steps that propagate evals from horizon nodes to the
root are shown here.
Tie Breaker: when several nodes have the same h-value then select
```

the deepest leftmost node. Node Info.: (NODE, PLAYER, STATUS, H)
