Lecture Game Tree Example — Slide 110

Notes prepared by S. Baskaran

Game Tree – Slide 110

Alpha-Beta Search Tree

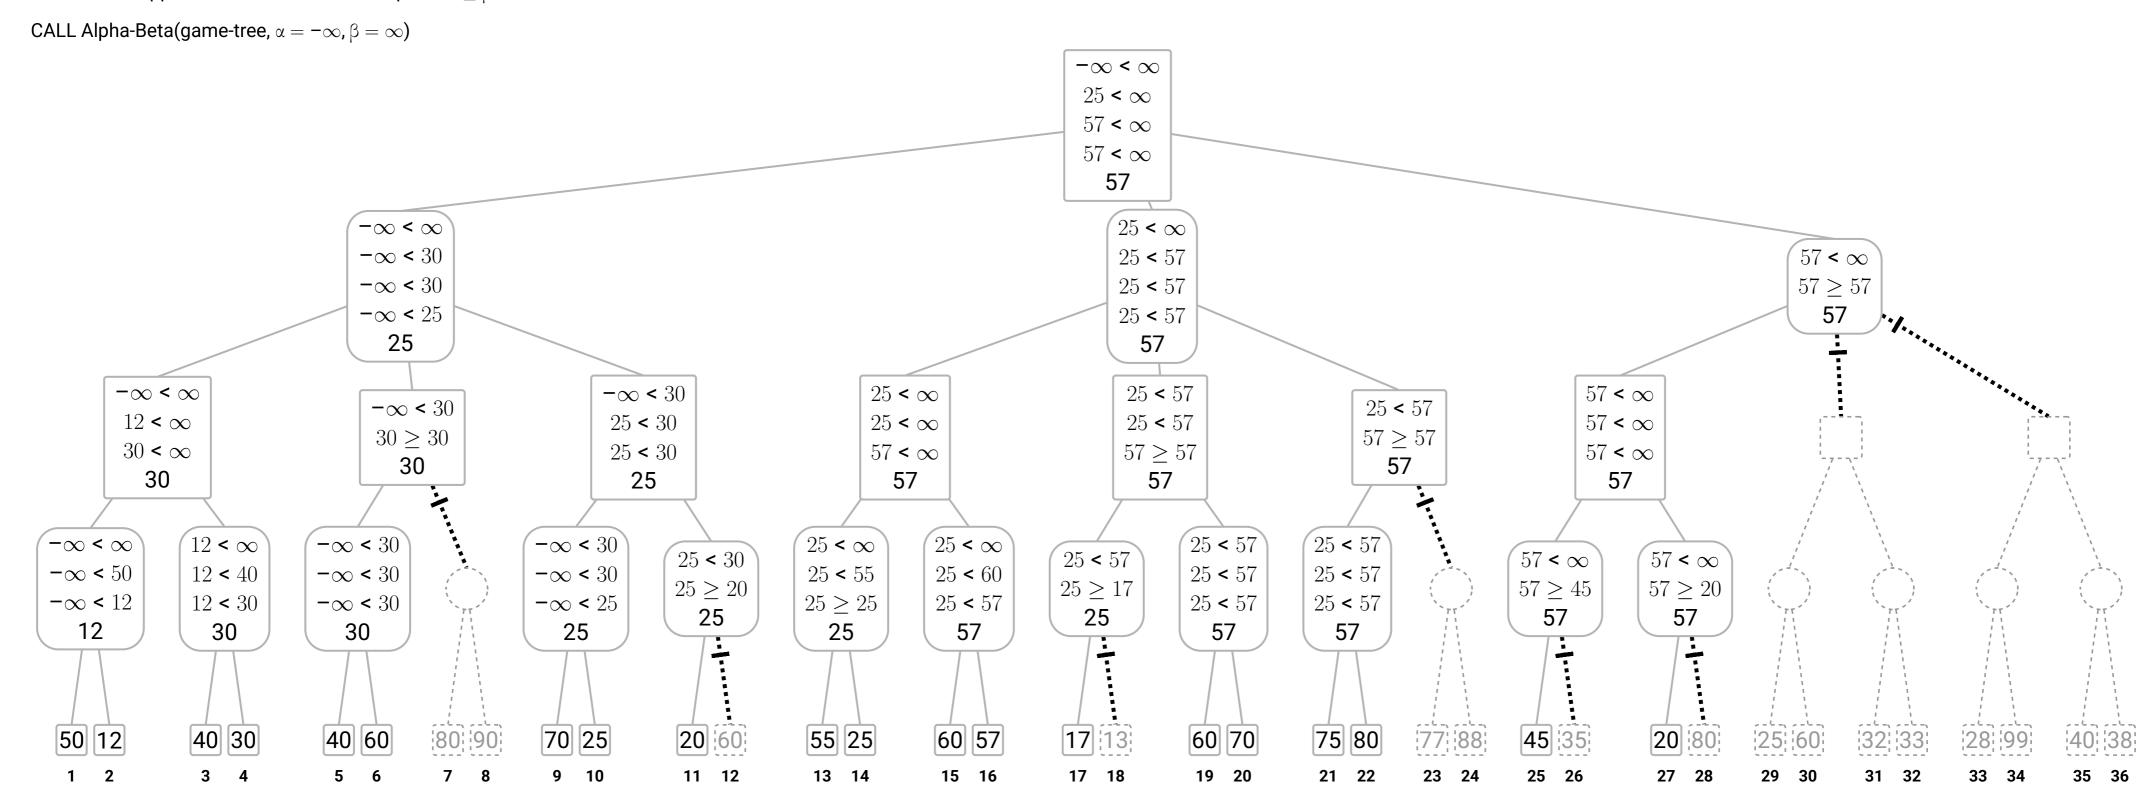

Alpha-Beta Solution

Each non-leaf node displays a list of alpha-beta bounds (open intervals) and a final value. The bounds are displayed in the format $(\alpha < \beta)$ or $(\alpha \ge \beta)$.

Each non-leaf node displays:

- an initial bound ($\alpha < \beta$) received from the parent node,
- · followed by several updated bounds, one for each child inspected,
- and the final value of the node.

The cut-off happens when the interval collapses: $\alpha \ge \beta$.

```
Alpha-Beta Solution
The game tree has 5 levels (a,b,c,d,e,f), the nodes in each level are numbered
from left-to-right: the root is a1 followed by b1, b2, b3; then c1,...,c9; d1,...,d18;
and e1,...,e36.
